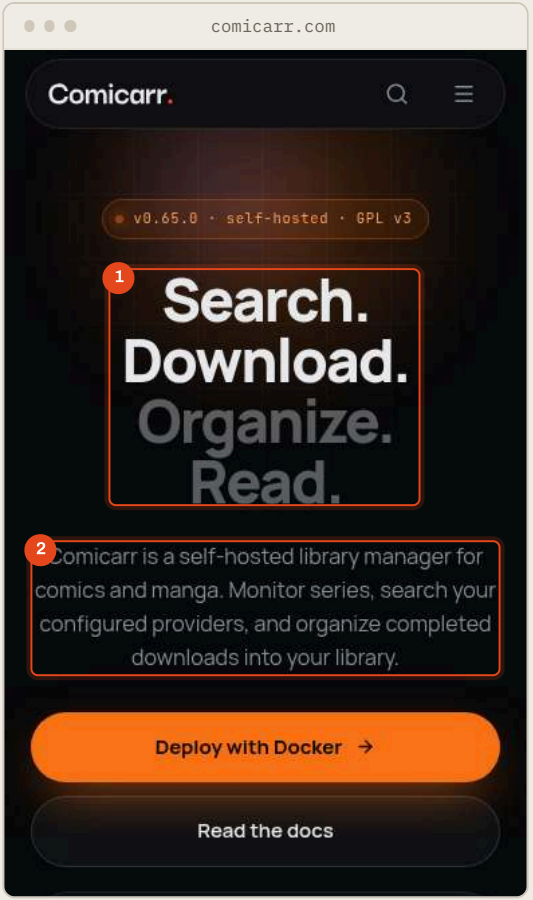
Mylar3 switchers must dig for the reason and the safety.

Each walker reached the docs quickly, but the home page never says why a Mylar3 user should switch, and the migration safety details sit deep in the docs.



> "Starting at home, looking for a Mylar3 migration page."
>
> Priya, Mylar3 user on her phone, step 1

66 of 100 from our panel

About 77 once the three moves are done

Do these three first

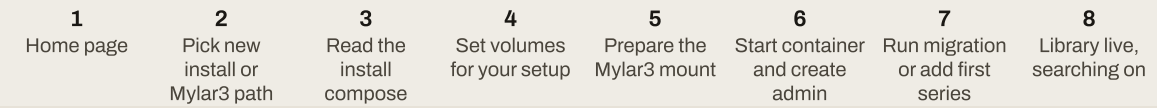
Every screen serves the person leaving Mylar3 first: say what they get, show the safe way over, prove it holds.

1. **Lead with comics and manga in one arr app**
2. **Give Mylar3 switchers their own Docker path**
3. **Make migration safety something a switcher can check**

3 walks by 3 synthetic visitors across 30 screens, read by 5 experts. Synthetic walks are signal, not proof: every finding shows the moment it was seen.

Where each visitor stopped

The moment that matters: **Comicarr is running with your Mylar3 library or first series inside it, searching on.**



Theo
homelabber with a Docker server

Stopped at Set volumes for your setup
“The compose is easy, but I'd have to rework the volumes myself for hardlinks before I trusted it with my library.”

Priya
Mylar3 user on her phone

Stopped at Prepare the Mylar3 mount
“My Mylar3 data looks safe, but a half-finished migration into Comicarr isn't rolled back and the docs don't say how to reset it.”

Marcus
developer judging the project

Stopped at Pick new install or Mylar3 path
“Docs are better than I expected for a young project, but the API key only covers read endpoints and I'd want to check the repo's activity first.”

Buyers rate “Move off Mylar3 safely” 90 of 100. The site delivers 45.

The product strategist’s read of how much buyers care and how much the product does for it, from the brief and the walks, not measured usage.

Each line runs from where a synthetic visitor started to where they stopped. Signal, not real traffic.

AI assistants named comicarr.com in 17 of 75 answers to buyer questions.

15 questions a buyer would ask, put to ChatGPT, Google AI Overview, Perplexity, Gemini, Claude on Nov 25, 2026. Measured, not simulated.

17
of 75 answers named you

11
linked your site

Assistant	Named you	Linked your site
ChatGPT	5 of 15	4 of 15
Google AI Overview	2 of 15	1 of 15
Perplexity	2 of 15	2 of 15
Gemini	1 of 15	0 of 15
Claude	7 of 15	4 of 15

More people ask an assistant instead of searching. GEO and AEO are the work of being one of the few names it gives.

What an assistant says about you, and whether it can read you

“Comicarr is a free, open-source, self-hosted comic and manga library manager built on Mylar3 and installed through Docker. It automates finding and organizing issues but has no reader, and I found only one independent review (positive).”

14 right, 0 wrong, 6 your site never says. One assistant with web search, asked about you by name.

▲ Missing

No reading interface of its own

Add: “State plainly whether Comicarr has its own reading interface, e.g. 'Comicarr has no built-in reader; it serves your library to reader apps through OPDS.”

▲ Missing

Only one independent review found, on noted.lol

Add: “The site shows no independent reviews. If any exist, link them.
You confirm: any third-party reviews to cite ”

▲ Missing

Reviewer likes the tracking of problem downloads, with activity history and rejection reasons

Add: “The site shows no reviewer opinion. Describe the Needs Attention view and rejection reasons in the site's own words, and don't attribute them to a reviewer.”

▲ Missing

Main limitation is that it has no reading interface

Add: “The site names no main limitation.
You confirm: the owner's stated limitations, e.g. whether there is a built-in reader ”

▲ Missing

No user reviews found on Reddit or forums

Add: “The site shows no user reviews from Reddit or forums.
You confirm: any community reviews or testimonials to link ”

What to do, in order

On your site

1. **Give one recommended compose file that works for torrents too**
   It stops an assistant quoting a storage layout that breaks hardlinks, and removes the contradiction.

2. **Add a plain page comparing Comicarr with Mylar3**
   It gives assistants a quotable answer to the most likely question: what changes if I switch from Mylar3.

3. **State release dates, first release and last update in plain sentences**
   It gives assistants checkable facts showing the project is maintained.

4. **Add software-application structured data with version, licence and install link**
   It gives answer engines one consistent set of facts to quote.

5. **Tie the site to who is behind it**
   Assistants trust and cite sources they can connect to a known person or company: structured data with sameAs links, named people and dates.

6. **Add a short FAQ with full-sentence answers on safety, requirements and support**
   Assistants quote complete sentences, and the current answers are scattered across long docs pages.

Off your site

9. **Get onto github.com**
   Assistants cited it in 49 of 75 answers. A listing, review or mention there is how a business gets into those answers.

10. **Get onto reddit.com**
    Assistants cited it in 19 of 75 answers. A listing, review or mention there is how a business gets into those answers.

Answers change from one ask to the next, so treat this as a baseline. Measure again a few weeks after changes to see what moved. Named means the answer said your name; linked means it cited a page on comicarr.com.

Four of five experts' biggest findings are fixed by the three moves

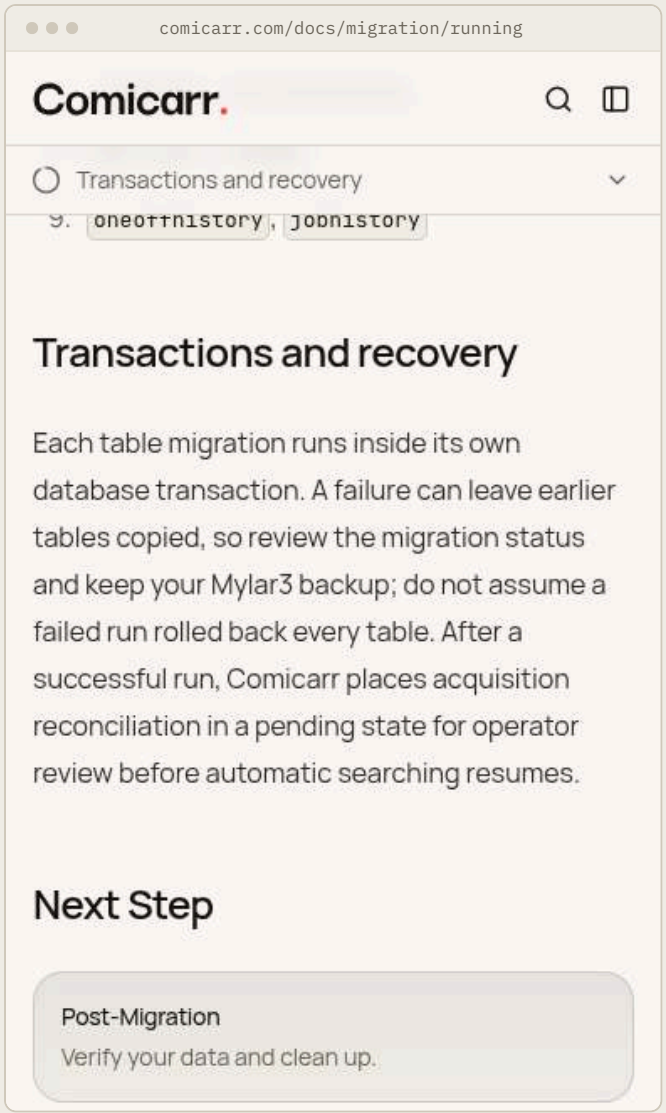
Marketing strategist	Move 1	Mylar3 users come to switch safely. Comicarr leads with verbs any rival could claim. Biggest finding: #17 Hero doesn't say it replaces Mylar3
Content and AI search	Move 1	Comicarr wins on "comics and manga in one *arr", a word it never uses. Biggest finding: #17 Hero doesn't say it replaces Mylar3
Designer	Move 1	A polished dev-tool template that hides the comics. It looks like any homelab app. Biggest finding: #17 Hero doesn't say it replaces Mylar3
Growth	Move 3	The Docker button quietly closes the Mylar3 door the site exists to open. Biggest finding: #18 Failed migration has no visible reset steps
Technical	Not in a move	Site works; the real risk is docs that can strand installers. Biggest finding: #10 Site gives search tools no product details

Where they disagree

Marketing strategist: Make the first screen say Mylar3 successor for comics and manga.

Content and AI search: Assistants already call Issuarr the drop-in Mylar3 successor. Claim comics and manga together instead.

Our call. Lead with comics and manga in one *arr app, and make the Mylar3 import the proof line right under it. That way Comicarr gets the ground it owns without fighting Issuarr for the word successor.



> “My Mylar3 data looks safe, but a half-finished migration into Comicarr isn't rolled back and the docs don't say how to reset it.”
>
> Priya, Mylar3 user on her phone, step 10

Move 1 of 3

Lead with comics and manga in one arr app

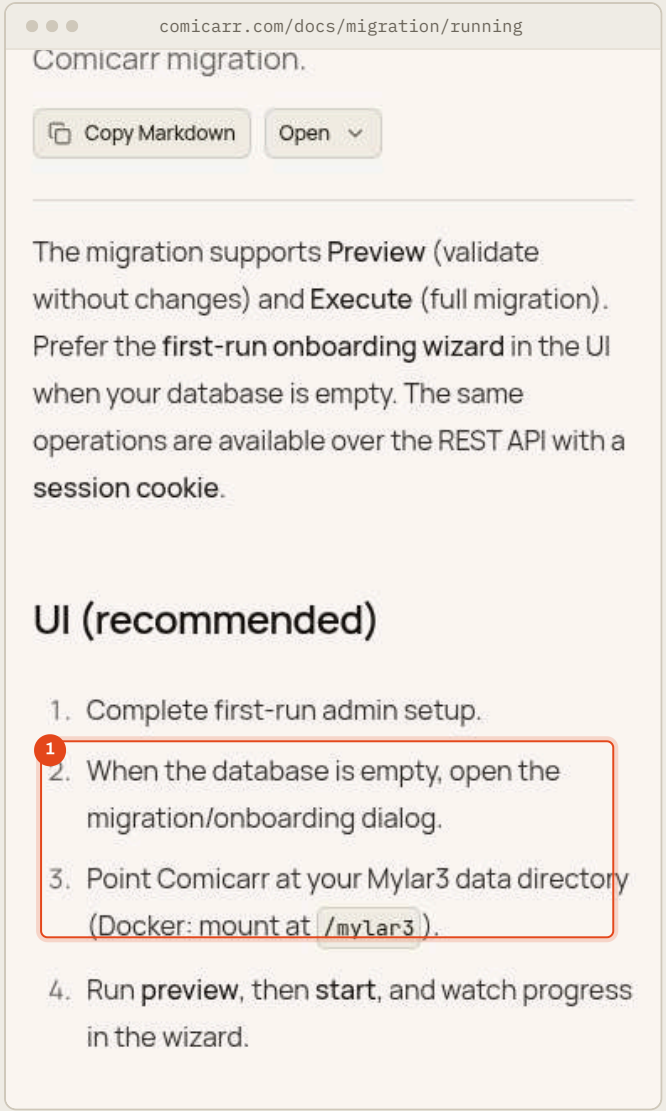
Priya came looking for Mylar3 and got four verbs any downloader could claim, with no comic or manga imagery. Theo thinks in *arr terms, and no page uses that wording. Outside research shows assistants credit Comicarr for comics and manga together.

Who	**web copy and design**
First step	**Replace the four-verb headline with one line: comics and manga in one *arr app, with a Mylar3 import built in. Put a real library shot behind it.**

What it fixes

#17 Hero doesn't say it replaces Mylar3

Rewrite the headline and subhead as one edit, for example: 'The Mylar3 successor for comics and manga.



> “Checking preview/dry-run option.”
>
> Priya, Mylar3 user on her phone, step 5

Move 2 of 3

Give Mylar3 switchers their own Docker path

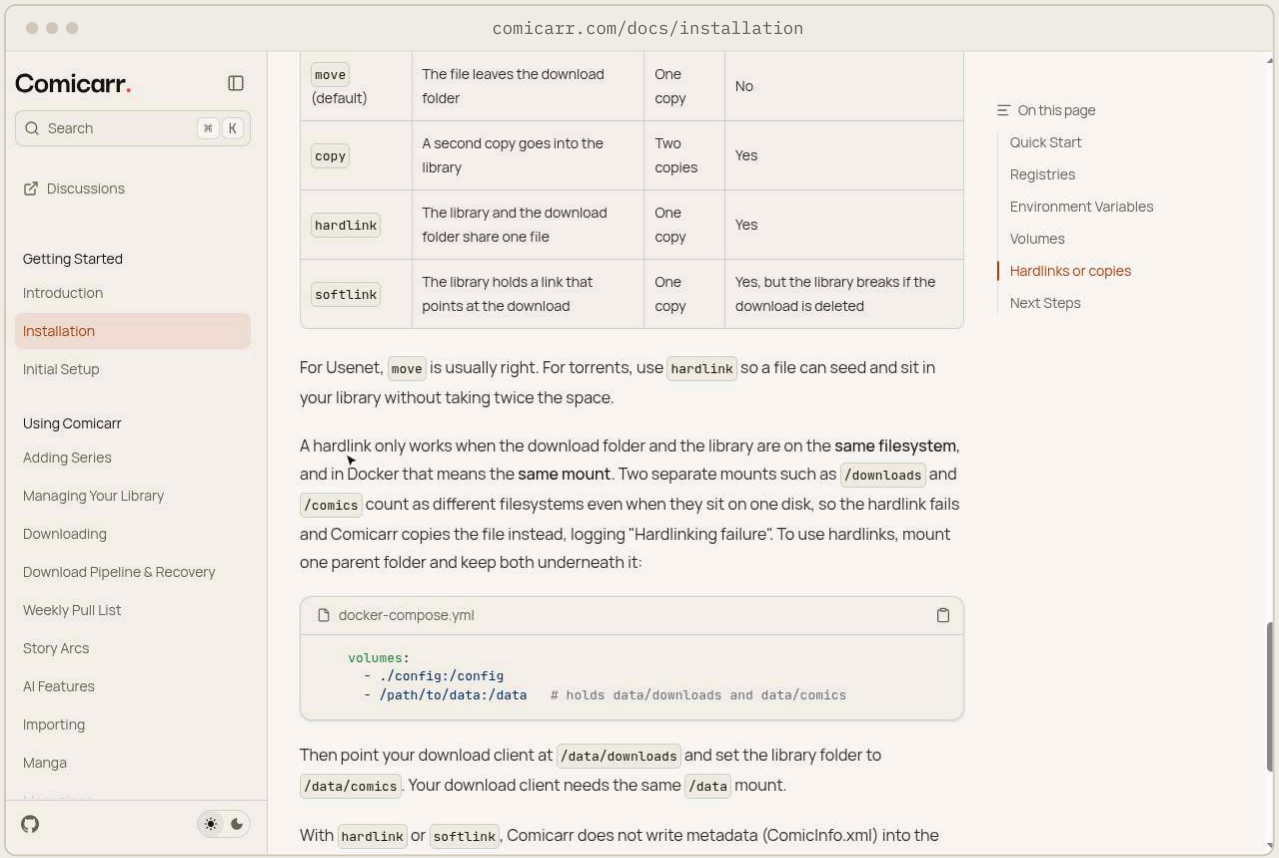
The main Docker compose has no /mylar3 mount and no warning about migration, yet the wizard runs only while the database is empty.

Who	**docs and web copy**
First step	**Add a second hero path, Coming from Mylar3, that leads to a compose with the read-only /mylar3 mount and a warning to migrate before adding anything.**

What it fixes

#23 Docker path ignores switchers from Mylar3

Under the hero button, add a second choice, 'Coming from Mylar3?'.



> “The compose is easy, but I'd have to rework the volumes myself for hardlinks before I trusted it with my library.”
>
> Theo, homelabber with a Docker server, step 6

Move 3 of 3

Make migration safety something a switcher can check

Priya found her Mylar3 data was safe, but a failed run leaves Comicarr half-migrated and the docs give no reset steps. The search-pause safeguard and the specific migration facts sit deep in the docs instead of on the home page.

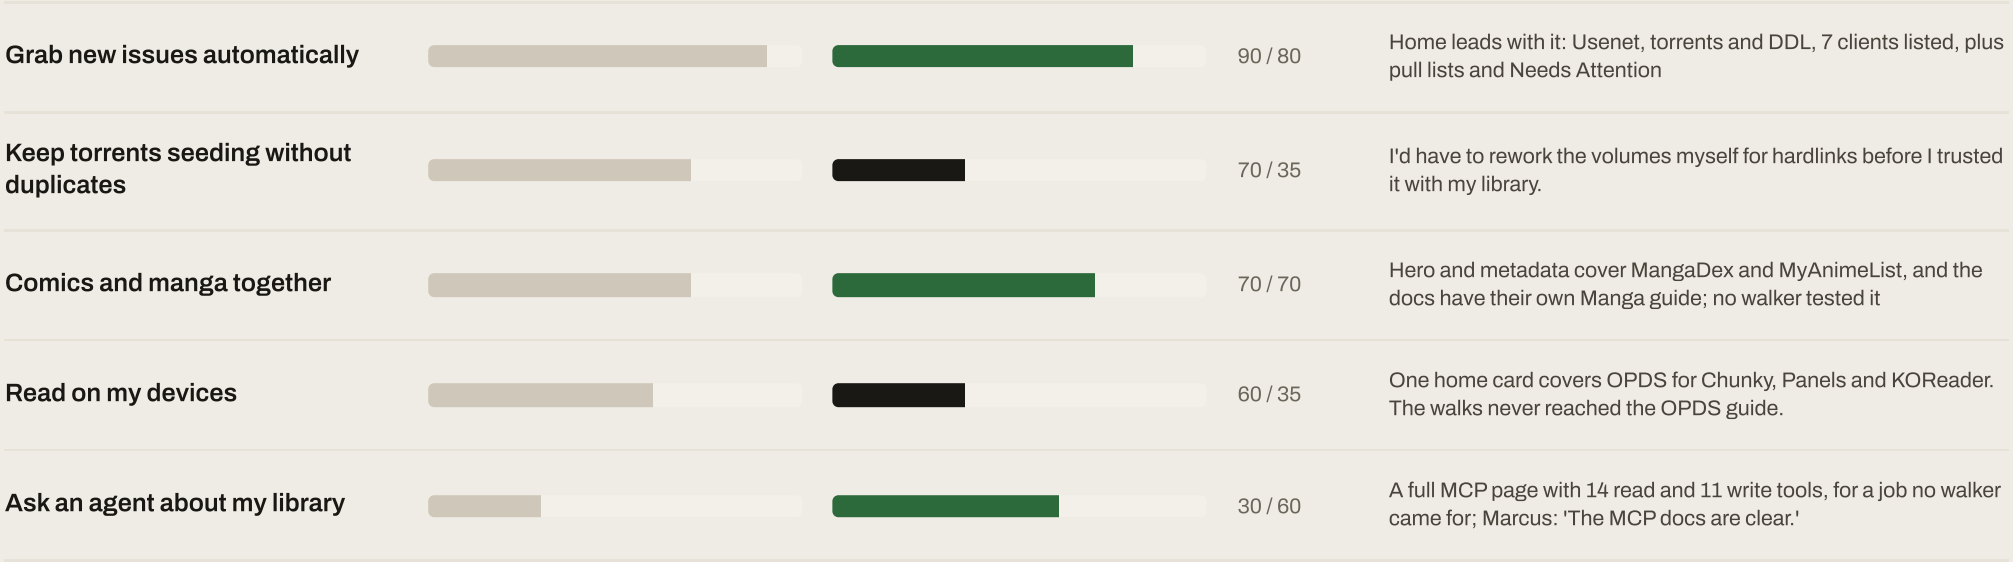
Who	**docs and engineering**
First step	**Write the reset steps for a half-finished migration on the Migration page, and change the prep example to mount Mylar3 read-only.**

What it fixes

#18 Failed migration has no visible reset steps

Put three checkable lines on the home Mylar3 block and the top of the migration guide: mount read-only (:ro), Preview writes nothing, and 'If a run fails: [reset steps]'.

Buyers rate “Keep torrents seeding without duplicates” 70 of 100. The product delivers 35.



Stop

Stop leading with 'Search. Download. Organize. Read.'
Generic; Priya came for Mylar3 and the hero never named it

Stop showing '201 series' mock stats as a headline
Sample data reads as a claim (#11)

Stop giving a quick-start compose that breaks hardlinks
Theo had to rewrite the volumes (#1)

Keep

One bright 'Deploy with Docker' button with the pull command
Theo reached install in one click

Honest caveats and what-doesn't-transfer lists
Priya: 'My Mylar3 data looks safe'

The MCP guide's plain, step-by-step style
Marcus: 'The MCP docs are clear.'

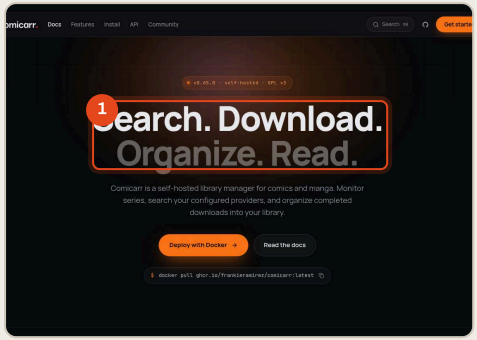
One more bet, for later

Make switching a reversible trial

Safety is the whole reason a Mylar3 owner acts. A trial they can undo removes the fear rather than arguing against it. Priya went looking for a preview or dry run and found none.

From the marketing strategist

Words to change

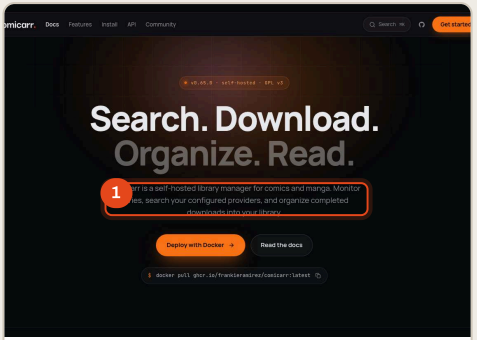


Home, hero headline

~~Search. Download. Organize. Read.~~

The *arr for comics and manga.

This is the buyer's own category word, the one Comicarr already ranks for but never writes. Kapowarr and Mylar3 don't cover manga this way.

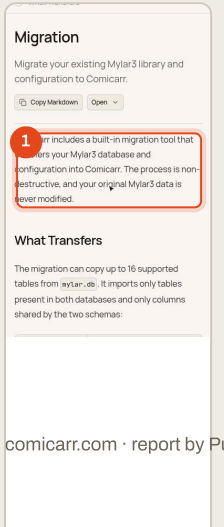


Home, hero subline

~~Comicarr is a self-hosted library manager for comics and manga. Monitor series, search your configured providers, and organize completed downloads into your library.~~

Comicarr is a self-hosted, Sonarr-style manager for comics and manga. It watches your series, sends new issues and chapters to SABnzbd, qBittorrent or your other client, and files them in your library. Coming from Mylar3? It imports your library and settings.

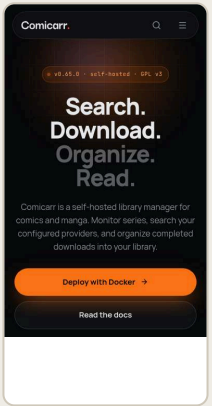
One sentence an assistant can lift, with the category, the clients the buyer runs and the reason to switch.



Migration page, opening paragraph

~~Comicarr includes a built-in migration tool that transfers your Mylar3 database and configuration into Comicarr. The process is non-destructive, and your original Mylar3 data is never modified.~~

Comicarr's first-run wizard copies your Mylar3 series, issues, pull list, story arcs and settings into Comicarr. It reads Mylar3 from a read-only mount and never changes it. Run Preview first; it writes nothing.



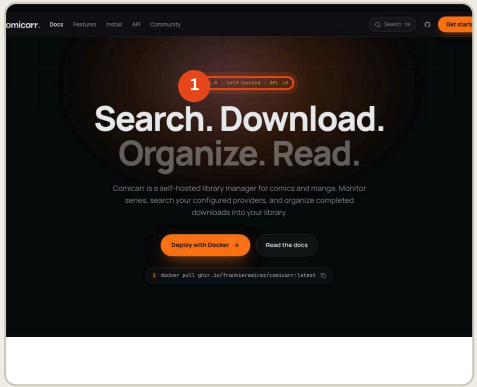
Home, Mylar3 block first sentence

~~Comicarr builds on Mylar3.~~

Comicarr builds on Mylar3 and adds manga from MangaDex and MyAnimeList, a new web app, and an agent connection.

Assistants already quote this sentence word for word, so it should say what changes for the switcher.

Six more findings, beyond the three moves



▲ Medium #19 +5 points

Version badge alone doesn't show upkeep

The only trust signal on the first screen is 'v0.65.0', which reads as young, against Mylar3's years of history.

What to do. Add the last release date and a link to the changelog in the badge, for example 'v0.65.0 · released [date]'.

Marketing strategist · Marcus, developer judging the project, step 1

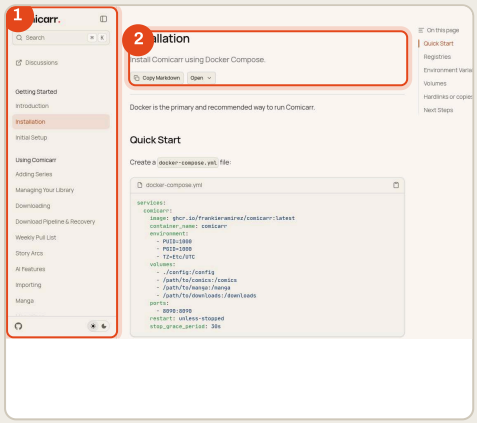
▲ Medium #10 +3 points

Site gives search tools no product details

Every page read shows Structured data: (none) and Canonical: (none).

What to do. Add SoftwareApplication JSON-LD on the home page with name, version, licence, install URL and repository link, and add canonical tags.

Technical



▲ Medium #20 +3 points

Dark home and cream docs feel like two sites

Clicking from the dark, branded home into the light cream docs changes the mood, the surface and the button style all at once.

What to do. Open the docs in dark by default to match home, or carry the home's ink and orange accents into the docs header and code blocks.

Designer · Theo, homelabber with a Docker server, step 2

▲ Medium #13 +3 points

Phone home page loads slowly

On a simulated phone the home page's largest paint is 2.6s, and the docs and install pages 2.9s, held up by the site's own scripts.

What to do. Defer the large shared script, compress the screenshot and cover images, and stop lazy-loading the main desktop image.

Technical

▲ Medium #14 +3 points

Code samples are faint and cramped on phones

Keys and comments in code samples measure about 4.1 to 4.3:1 contrast.

What to do. Darken the code sample comment and key colours to at least 4.5:1, and add padding to footer links.

Technical

▲ Medium #4 +2 points

Install page never mentions the setup token

The Installation page ends with opening the app, but the Troubleshooting page says setup fails without a one-time token printed only in the container logs (docker logs comicarr 2>&1 | grep SETUP).

What to do. Add a line after "Open http://localhost:8090" on the Installation page: find the setup token with docker logs comicarr 2>&1 | grep SETUP.

Technical

3 small fixes, and 7 things to keep

	Finding	What to do	Seen by
○ Low #21	**Phone hero breaks the docker command**	Let the command scroll on one line or shorten it with a copy button. Lay the integrations out as a wrapping chip grid without separator dots.	Designer
○ Low #24	**The install button has five different names**	Call it "Deploy with Docker" everywhere it goes to the install page, and "Docs" only where it goes to the docs.	Content and AI search
○ Low #22	**Migration page offers Post-Migration twice in a row**	Drop the hand-written Next Step card wherever the pager already points to the same page.	Designer
● Keep	**Keep Deploy with Docker as the one bright action**	Theo went from the home page to install in one click, and the copyable pull command sits right under the button. This matches how the buyer arrives.	Marketing strategist
● Keep	**Keep the plain lists of what transfers and what does not**	The migration page lists the tables that move and the things that don't, and Priya came away judging her Mylar3 data safe.	Marketing strategist
● Keep	**Keep the one-tap Docker ask and pull line on phones**	On Priya's phone, the hero shows a full-width Deploy with Docker button and a copyable docker pull line before any scrolling.	Growth
● Keep	**Keep the plain promise that Mylar3 data is never modified**	The Migration page opens by saying the process is non-destructive and Mylar3 data is never modified, then lists exactly what transfers.	Growth
● Keep	**Keep the MCP page opener as written**	Its first lines say who it's for, what an agent can do, and what it can never do ("Agents can never delete a series or files"), and the agent table says Claude Code is "Tested with each release".	Content and AI search
● Keep	**Keep the honest migration caveat on the home page**	"migration cannot guarantee that downloads never repeat" is a limit few projects would admit.	Content and AI search
● Keep	**Numbered steps in the docs are the model to copy**	The migration and MCP pages lay out actions as large numbered steps on a rail, with short plain sentences.	Designer

Expert 1 of 5

Marketing strategist

Is the offer right for this buyer?

55 of 100

Mylar3 users come to switch safely. Comicarr leads with verbs any rival could claim.

No brief was given, so I assumed the buyer is a homelabber who already runs Mylar3 and is deciding whether to switch. The site's own words back this ("Built on Mylar3", a built-in migration wizard, a Docker first CTA), and the real alternative is staying on Mylar3. The product and docs are honest and deep, but the first screen never says "move off Mylar3 safely". The proof a switcher needs (a read-only import, a way to reset, signs of upkeep) sits in the docs or is missing.

How the 55 adds up

Partly	The site speaks to one clear buyer throughout	15 / 20
Partly	The site owns one idea that sets it apart, and leads with it	8 / 25
Partly	Names, results and people back the site's main claim	6 / 20
Partly	The offer and its price or cost fit the buyer it is for	15 / 20
Partly	The site cuts what distracts from its case and points to one action	11 / 15

What they found

▲ Medium #17

Hero doesn't say it replaces Mylar3

Rewrite the headline and subhead as one edit, for example: 'The Mylar3 successor for comics and manga.

▲ Medium #18

Failed migration has no visible reset steps

Put three checkable lines on the home Mylar3 block and the top of the migration guide: mount read-only (:ro), Preview writes nothing, and 'If a run fails: [reset steps]'.

▲ Medium #19

Version badge alone doesn't show upkeep

Add the last release date and a link to the changelog in the badge, for example 'v0.65.0 · released [date]'.

Keep

Keep Deploy with Docker as the one bright action

Expert 2 of 5

Growth

Do people get to the moment they pay for?

65 of 100

The Docker button quietly closes the Mylar3 door the site exists to open.

With no brief, I followed the strategist and assumed the buyer is a homelabber deciding whether to leave Mylar3 for a free, self-hosted Docker install. The moment that matters is Comicarr running with their library inside it. All three walkers found the page they wanted in one click from home. None got far enough to want to run it, and the reasons differ: Theo would have to rework his volumes, Priya hit a recovery gap, and Marcus wanted proof the project is active.

How the 65 adds up

Partly	A visitor who came to act reaches the one action without help	17 / 25
Partly	The ask, and the payoff it promises, sits where the visitor decides	12 / 20
Partly	It gives a reason to get in touch now rather than later	5 / 15
Partly	Each kind of visitor has an ask that fits them, and poor fits learn early	9 / 15
Met	Forms and contact ask only for what they need	10 / 10
Partly	Visitors on a phone can act as easily as on a computer	12 / 15

What they found

▲ Medium #18

Failed migration has no visible reset steps

In the home page's Mylar3 section, put the two safeguards next to the duplicate warning, using the docs' exact terms: Preview validates 'without changes', and automatic searching waits for 'operator review'.

▲ Medium #23

Docker path ignores switchers from Mylar3

Under the hero button, add a second choice, 'Coming from Mylar3?'.

Keep

Keep the one-tap Docker ask and pull line on phones

Expert 3 of 5

Content and AI search

Do the words win the buyer and the answer engines?

62 of 100

Comicarr wins on "comics and manga in one *arr", a word it never uses.

No brief was given. I assumed the buyer is a homelabber who already runs the *arr stack, often with Mylar3, and now wants comics and manga handled by one self-hosted app. Install is free and Docker-first, with no sign-up. The docs are honest and specific, and assistants already describe Comicarr as "comics and manga in one modern app built on Mylar3". But the site never uses the buyer's own category word ("*arr", "Sonarr for comics"), and it leads with four verbs every rival could claim.

How the 62 adds up

Partly	A visitor quickly knows who the site is for and whether they are that person	17 / 25
Partly	The site says one thing clearly, in the buyer's terms, near the top	13 / 25
Partly	What is being sold and the next step are named plainly and consistently, and match the audience the headlines address	16 / 20
Partly	The site leads with named, specific evidence only this business has	6 / 15
Partly	Key pages open with standalone sentences an assistant could quote, naming the business	10 / 15

What they found

▲ Medium #17

Hero doesn't say it replaces Mylar3

Put "*arr" or "Sonarr-style" in the hero, the page title and the docs Introduction opener, so the category sentence names Comicarr.

▲ Medium #17

Hero doesn't say it replaces Mylar3

Lead with "comics and manga in one *arr". Make the Mylar3 import the supporting line under it, not the headline.

▲ Medium #18

Failed migration has no visible reset steps

Rewrite the home Mylar3 block's first sentence to name what Comicarr adds and exactly what carries over.

Keep

Keep the MCP page opener as written

Expert 4 of 5

Designer

Does it feel made for them?

67 of 100

A polished dev-tool template that hides the comics. It looks like any homelab app.

No brief was given. I agree with the strategist's buyer: a homelabber, often already on Mylar3, who runs the *arr family on Docker and wants comics and manga handled the same way. The site is well crafted. The dark home page with its orange glow and the clean docs are current and calm. But the first screen shows no comic or manga at all, and the jump from a dark home to cream stock docs, with small repeated elements, makes it feel assembled from a template rather than made for comic collectors.

How the 67 adds up

Partly	It looks current, crafted and finished next to the best sites in its field	21 / 30
Partly	It looks and feels made for the people it is for	14 / 25
Partly	Each page makes the offer and the next step obvious	15 / 20
Partly	Nothing on the page is there without a reason	11 / 15
Partly	It holds together as one site	6 / 10

What they found

▲ Medium #17

Hero doesn't say it replaces Mylar3

Bring the library mock from further down, with real-looking covers for comics and manga side by side, into the first screen under or beside the headline.

▲ Medium #17

Hero doesn't say it replaces Mylar3

Give both lines full weight, or flip the emphasis so organizing and reading carry the brand.

▲ Medium #20

Dark home and cream docs feel like two sites

Open the docs in dark by default to match home, or carry the home's ink and orange accents into the docs header and code blocks.

Keep

Numbered steps in the docs are the model to copy

Expert 5 of 5

Technical

Does it work?

80 of 100

Site works; the real risk is docs that can strand installers.

I assumed Comicarr is a free, self-hosted comic library manager for homelab users who install it with Docker, and that many come over from Mylar3. Every page the walkers reached loaded, but the install docs can strand a first-time user at the setup token, and phones get slow loads, small tap targets and a cut-off compose block.

How the 80 adds up

Partly	Every page and link a visitor reaches works	23 / 25
Partly	Contact and lead forms work where they are offered	14 / 20
Partly	Search and AI crawlers can read each page and know what it is	12 / 15
Partly	Nothing breaks on a phone or a slow connection	12 / 15
Partly	Pages load fast enough not to be noticed	12 / 15
Partly	Labels, contrast and tap targets work for everyone	7 / 10

What they found

▲ Medium #10

Site gives search tools no product details

Add SoftwareApplication JSON-LD on the home page with name, version, licence, install URL and repository link, and add canonical tags.

▲ Medium #13

Phone home page loads slowly

Defer the large shared script, compress the screenshot and cover images, and stop lazy-loading the main desktop image.

▲ Medium #14

Code samples are faint and cramped on phones

Darken the code sample comment and key colours to at least 4.5:1, and add padding to footer links.

How we tested, and what synthetic walks can’t tell you

Our AI visitors used comicarr.com the way its people would: 3 walks by 3 synthetic visitors across 30 screens, each thinking out loud. Then 5 experts read the same walks, each through its own principles, and a lead read all of them. Nobody walked again for this report. Findings are checked against what was stored before they reach you, and every one shows the moment it was seen.

What this is not. Synthetic walks are strong signal to verify, not proof of what real customers do. No visitor numbers, analytics or revenue were used. Scores are an expert read from 0 to 100, the sum of points each expert awarded against its own criteria, and the overall is their mean.
